JavaScript

JavaScript : String

The **JavaScript string** is an object that represents a sequence of characters.

There are 2 ways to create string in JavaScript

1.By string literal

```
const message = "Let's learn JS";
```

2.By string object (using new keyword)

```
const anotherString = new String("Let's learn JS");
```

JavaScript : String

JavaScript String Methods

1. `charAt()`

2. `charCodeAt()`

3. `concat(str1, str2, ...)`

4. `includes()`

5. `endsWith()`

6. `indexOf()`

7. `lastIndexOf()`

8. `match()`

9. `matchAll()`

10. `repeat()`

11. `replace()`

12. `replaceAll()`

13. `search()`

14. `slice()`

15. `split()`

16. `startsWith()`

17. `substr()`

18. `substring()`

19. `toLowerCase()`

20. `toUpperCase()`

21. `toString()`

22. `trim()`

23. `valueOf()`

Thank you
