

CSS List Property

We can style the lists using CSS. CSS list properties allow us to:

- ☐ Set the distance between the text and the marker in the list.
- ☐ Specify an image for the marker instead of using the number or bullet point.
- ☐ Control the marker appearance and shape.
- ☐ Place the marker outside or inside the box that contains the list items.
- ☐ Set the background colors to list items and lists.

CSS List Property

CSS Syntax for style in List

```
list-style-type: value;
```
