JavaScript : Switch Statement

The switch statement is used to perform different actions based on different conditions.

This is how it works:

- The switch expression is evaluated once.

- The value of the expression is compared with the values of each case.

- If there is a match, the associated block of code is executed.

- If there is no match, the default code block is executed

JavaScript : Switch Statement

JavaScript : Switch Statement

```javascript
switch (expression) {

    case value_1:

        statement_1;

        break;

    case value_2:

        statement_2;

        break;

    case value_3:

        statement_3;

        break;

    default:

        default_statement;

}
```

Thank you
