Drop Down List

- The selection list is displayed as a drop-down menu from which the user can select one or more options, depending on its attributes.

- The HTML <**select**> tag is used to create a dropdown list. It is also used in forms to collect user input.

- The <**option**> tag is used to display available options in a dropdown menu.

Syntax of Drop Down List

```
<select>

<option value="">option1</option>

<option value="">option2</option>

<option value="">option3</option>

<option value="">option3</option>

</select>
```

Attribute of Drop Down List

Attribute	Description
Name	It is used to give a name to the control that is sent to the server to be recognized and get the value.
Size	It is used to present a scrolling list box.
Multiple	If it is set to "**multiple**" then allows the user to select the multiple items from the menu.
Label	Label attributes works as another approach to labeling options value.
disabled	We should keep our drop-down list disable from the user with the help of this attribute.

Tip: Always add the <label> tag for best accessibility practices!
